previously saved **D**atLab Data file. It is not possible to open a second file simultaneously. You can do this in an additionally opened DatLab programme. If DatLab is connected to

1.1. Open

the O2k for recording, another DatLab file cannot be opened before disconnecting the O2k and closing the currently recorded file.

- **1.2. Close** Ctrl+F4 Close a DLD file. A window Save changes to file? pops up offering the options to close the file after saving the changes, or close the file without saving any modifications on the presently open file.
- **1.3. Save Ctrl+S** When disconnected from the O2k, save any changes made under the identical file name overwriting the previous file. Such changes do not affect the raw data of the experiment, but relate to calibrations, experimental protocol, marks, events, and layout.
 - **Temporary backup files** are generated by DatLab in the current user's temp directory, indicated by adding tmp.\$\$\$ to the file name. These files are retained only if the PC has failed during data analysis. During data acquisition, the data are written continuously onto the file, hence backup files are not necessary under these conditions.
- **1.4. Save and disconnect Ctrl+F4** Stop data acquisition and disconnect from the O2k (<u>MiPNet19.18A</u>).
- **1.5. Save as** When disconnected from the O2k, save the file under a different file name, optionally in a different directory.
- **1.6. File search Ctrl+F** yields a list of all files labelled by the experimental code in a selected directory (see Experiment \ Edit F3). Click on the file name to preview the protocol.
- **1.7. Delete** The decision to delete a file containing no useful data can be made most easily when viewing the traces. Only available when disconnected from the O2k.

1.8. Import	DatLab template	es can be imported for O2k setups,
Import DatLab templates		graph layouts, mark names, TIP2k

	Import selected templates Close	\DatLab\DLTemplates from:

http://www.bioblast.at/index.php/DatLab_templates

1.9. Export

Data to text file (*.csv) exports plots and events to a text file for further use in Excel and other programs.

Events to text file (*.csv) exports all information in Events to a text file (*.csv). This file may be used as a protocol, including the comments in the Events.

One channel to DatLab 2 analysis exports the O2 raw signal to a DatLab 2 file (*.DLR); e.g. for O₂ kinetics in DatLab 2.

- **1.10.** Change user Enter the name to update the user code.
- **1.11. Manage users** Rename or delete users.
- **1.12. Exit** Exit DatLab.

2. Oxygraph-2k

- **2.1. O2k control F7** Control the O2k operation 📀 DatLab (G-0080) [C:\Team_DatLab\DatLab File Oxygraph-2k TIP2k Experiment C mode. » MiPNet19.18A O2k start O2k control F7 O2k configuration 2.2. Experimental code Up to 10 digits. The File search function Ctrl+F lists all files with identical experimental code within a selected directory.

File recorded by (*read only*) shows the user who recorded the file. While connected to the O2k the User code can be changed by L $^{\circ}$ Change user.

O2k serial number (*read only*) automatically recorded.

(*read only*) as defined in the menue Oygraph-2k \setminus O2k configuration.

The following entries are entered separately for the left

Chamber

Protocol Sample

Unit

Enter the protocol name.

(A) and right (B) O2k chamber.

Enter information about sample used in each chamber. No sample is added in O_2 calibration experiments.

• Sample type, Cohort, Sample code, Sample number, Subsample number

» <u>http://www.bioblast.at/index.php/Edit_experiment_in_DatLab</u>

Sample concentration and amount

- Unit ▼ Select a unit to express the concentration or amount of sample in the HRR assay.
- <u>Million cells</u> ▼ Flow: cell number

<u>ma</u> $\mathbf{\nabla}$ - Flux: mg of protein, wet weight or dry weight.

▼ - Flux: units of another marker of sample size.

Concentration Enter the sample concentration (e.g. Million cells/ml, mg W_w /ml, mg mt-protein/ml). The corresponding amount of sample is calculated on the basis of the O2k chamber volume.

Amount Alternatively, enter the sample amount (e.g. biopsy W_w) if a known amount of sample is added into the chamber. The corresponding sample concentration is calculated on the basis of the chamber volume.

Medium Name of the incubation medium in the O2k chamber.

Chamber volume The default is 2.00 ml. It is important to define the actually used effective volume of the O2k chamber for further calculations of oxygen flux.

Data recording interval [s] (*read only*) is selected in the window O2k control F7.

Comments For display and printing in the window Experimental log.

Ctrl+F3 4.2. Experimental log The experimental log is generated automatically with information on O2k settings and calibrations, the Edit experiment window and various events. Time-dependent information can be viewed for chambers A, B or both. A filter is selected for viewing minimum, intermittent (default), or all information. L^A Preview to view the protocol, and Save as PDF file for quality control.

4.3. Add event F4

Events

An event is a defined point in time, labeled by a name (1 to 10 characters). The event is shown by a vertical line in the graph (line style can be modified under Graph\Options) and the label of the event is shown at the top of the graph. A short comment can be entered to describe the event in detail.

- **F4** Real-time: Press F4 to set an event quickly at the Set events current time of the experiment (e.g. to indicate a manual titration into the chamber). The Edit event window pops up after setting a new event. Pressing F4 defines the time point of the event. Full attention can then be paid to the experiment. Edit the event later.
- Ctrl+L∕ð Insert an event at any chosen moment of the plotted record of the experiment by placing the cursor anywhere in the graph at the selected time point, press Ctrl and click the left mouse button Ctrl+L².
- Edit event L^{-1} Left click on the name of an existing event to open the Edit event window to edit or Delete event.

Enter an event name of 1 to 10 characters. Short Name names (e.g. O instead of Open) are recommended.

Comment Further information can be entered into the text field.

Chamber C A C B
 Both Select O2k chamber A, B or both. The Event will be shown on plots for both or one selected chamber.

Further details: http://www.bioblast.at/index.php/Select plots in DatLab

Load layout Select layout category (○ Reference, ○ All users, ⊙User: Name), select Layout type: O2k-Core ▼, O2 & Amp ▼', O2 & pX ▼, Other ▼ (depending on the channel selection in O2k configuration), and Layout name ▼.

Save layout A layout can be saved with any layout name under the category ⊙ All users or ⊙ User: Name.

7.3.2. Tab: System channels

Block temperature The continuously measured temperature of the copper block, housing the two glass chambers [°C].

Barometric pressure The continuously recorded absolute (local) barometric pressure [kPa].

Ext temp Signal from external PT1000 temperature sensor (optional), "50.000" if no sensor connected [°C].

Env temp Temperature from internal temperature sensor recording the environmental (room) temperature [°C].

Peltier power for regulation of block temperature, continuously recorded [% of maximum power].

7.4. Scaling

7.4.1. Graph \ Scaling F6

lots	Scaling Info				
Sele	ect graph Graph 2 💌	Apply to Graph 1 Graph 2			
Axis	Quantity		Minimum	Maximum	Range
Y 1	6B: O2 concentration	[µM]	0.000	250.000	250.000
Y2	6B: O2 flow per cells	[pmol/(s*Mill)]	0.000	100.000	100.000
×	Time	hh:mm:ss	00:00:00	00:30:00	00:30:00

L \oplus Left mouse click on the X-, Y₁- or Y₂axis opens the window Graph layout Scaling. F6 provides flexibility to vary the display of the plots and create Graph layouts. Viewing plots in differently scaled graphs, zooming the signal and time scales, and scrolling along the axes of the graph provide maximum information on the current experiment, but do not influence the format of stored data. Different ranges for the axes change the appearance of data dramatically.

Choose a Graph reference layout for a standard layout.

Select graph \checkmark Pull down to select any of the defined graphs.

- **Minimum** Defines the minimum axis position (suppression) for the display of data at a constant range.
- **Maximum** Defines the maximum axis position for the display of data at a constant range.
- **Range** Define the range of the Y_1 axis (left), Y_2 axis (right) and X axis (Time).

Select a predefined Graph layout from the options in the pull down menu. Edit the Graph layout name by a L $^{\circ}$ click on the name, and L $^{\circ}$ Save to save the entire graph layout.

Apply to Graph 1 The scaling defined for Graph 2 is applied to Graph 1.

7.4.2. Arrow keys

Use arrow keys to scrol (data on *Y*-axes), pan (time on *X*-axis), or zoom (expansion or compression: Ctrl+arrow key), independet of the F6 window.

1 or 🗸

L[®] Select the active plot in a graph by a left click onto the label of the plot in the figure legend on the right. The active plot is highlighted. Scrolling and setting marks apply to the active plot.

Scroll up and down the Y axis, with a shift of 50% each time of the active plot.

- Ctrl+ \uparrow Magnify the signal (half the signal range is displayed).
- $\begin{array}{c} \hline Ctrl+\downarrow \\ the signal range is displayed). \end{array}$
- \rightarrow or \leftarrow Panning, shift 50% of the time axis to the right or left. During data acquisition, switch off automatic panning to pan backwards without changing the time range.
- $\underbrace{\text{Ctrl}}_{\rightarrow} \qquad \text{Magnify the time resolution on the screen (decreasing the time range). } \underbrace{\text{Ctrl}_{\rightarrow}}_{\rightarrow} \text{ expands the data, half the original time range is displayed. The upper limit of the time range is fixed.}$

Ctrl+←

Cover a larger time range on the screen. $Ctrl+\leftarrow$ compresses the data, twice the original time range is displayed. The reference time point is fixed on the right during zooming in and out.

7.5. Graph Info

7.6. Snchronous time axes

☑ Sets the time axes of all graphs at an identical range and offset, which is particularly useful while panning.

7.7. Autoscale time axis

Autoscale the entire experimental time scale.

7.8. Autoscale Y1 (Y2) axis

Autoscale the full data range.

7.9. Automatic pan

☑ Toggles automatic panning on/off, » <u>MiPNet19.18A</u>, Status line.

7.10. Mouse control: Zoom Ctrl+Z

⑦ Zoom in Select ☑ Mouse control: Zoom in the menu or press Ctrl+Z. L[®] click into the graph where you want to zoom in. Place the cursor at the upper lefthand corner of the field for zooming. Hold Shift, press the left mouse button Shift+L[®] and slide the cursor to the lower righthand corner to define the field for zooming in. The text for all axes now indicates the respective range (full scale).

7.11. Mouse control: Mark Ctrl+M

The Mark mode is active by default, or can be selected in the menu or by Ctrl+M. Specific sections of the experiment can be marked on each plot. Usually, marks are set on the plot for oxygen concentration for calibration (MiPNet19.18D), whereas marks on the plot for oxygen flux are set for exporting the median or average of flux to a table.

7.12. Full screen ☑ On/Off

☑ On The selected graph may be shown alone on the full screen ☑, or together with the other defined graphs
 Off. Full screen is particularly useful for a single channel overview and for Copy to clipboard ALT+G B.

7.13. Display numerical value

☑ On

 $\mathbf{\nabla}$

,

The current numerical values are displayed in the graph for the active plots on the Y_1 axis and Y_2 axis (during data acquisition only).

7.14. Display Power-O2k

⊠ On

- The Power-O2k number, set in
- Oxygraph-2k \setminus O2k configuration, is shown in the active graph.

7.15. Graph options

- ☑ Show legends ☑ On/Off Shows the quantities plotted on each Y axis.
 - **Show gridlines** gives options to show or hide vertical and horizontal gridlines.
- Show marks ☑ On/Off optionally shows or hides marks in all graphs, without deleting the marks.

- Show events ☑ On/Off optionally shows or hides events in all graphs, without deleting the events.
 - **Font** Change font size and style of axes labels and numbers. **Event line style** can be modified.

Show OROBOROS icon in clipboard files Yes!

□ Show seconds on time axis gives an option to exclude or ☑ include the display of seconds on the labels of the time axis.

7.16. Copy to clipboard

Select the active graph. In the Graph menu, L^{\oplus} Copy to clipboard, and select the WMF or BMP format (<u>Graph</u>Copy to clip<u>b</u>oard<u>WMF</u>); <u>Alt+G B W</u>. Open the target file (DatLab-Excel template, Word, PowerPoint, Paint, etc.), and paste the image <u>Ctrl+V</u>.

8. Layout

Graph layouts are selected from the Layout menu for standardized display of graphs, plots and scaling of axes.

Layout Marks ? Info / Load / Save Reference layouts All users User: OROBOROS Most recently used layouts: • 05a Specific flux-RP2Pc (User) • 05a Specific flux (Reference) • 04a Flux per volume (Reference) • 02 Calibration - Background (Reference) • 01 Calibration show Temp (Reference)

8.1. Info / Load / Save

Open this window (Section 7.5) to view and edit information, and load or save a graph layout.

Reference layouts Layout type 02k-Core ✓ All users User: OROBOROS Layout name 05a Specific flux ✓	Load layout	Save layout		
O User: OROBOROS Edybarnanie osta oposinia nav				
MitoPedia: Layout for DatLab graphs			Cancel	ОК

Types

Four types of layout can be selected depending on the O2k configuration:

- O2k-Core: Oxygen channel ony.
- O2 & Amp: Oxygen and amperometric channel.
- O2 & pX: Oxygen and potentiometric channel.
- Other

8.2. Reference layouts – O2k-Core

In many Reference layouts, plots are shown for the left chamber in Graph 1 (top), and the right chamber in Graph 2 (below). During data acquisition, a 30 min time range is frequently used.

01 Calibration show Temp The layout used after switching on the performing oxygen calibration. Oxygen for 02k, concentration (blue lines, left Y-axis) and O2 slope negative (red lines, right Y-axis) are displayed in the top graph for the left chamber, and below for the right (bottom) chamber. Graph 3 shows the block temperature on the left Y axis and the Peltier power on the right *Y* axis. The chambers reach thermal equilibrium

34

when Peltier power stabilizes. Next observe equilibration of the oxygen signal with air in the gas phase above the stirred aqueous phase ('open' chamber), to perform an oxygen calibration (<u>MiPNet19.18D</u>).

- **02 Calibration Background** for recording O2 sensor calibration and instrumental O₂ background test. 'O2 Slope neg.' is the negative slope of oxygen concentration, multiplied by 1000 to convert to units [pmol/ml], over time [s]. No correction is applied for instrumental O₂ background flux, J^{o}_{O2} . 'O2 Slope neg.' is plotted on the right *Y*-axis with a scaling to display ±10 pmol·s⁻¹·ml⁻¹ and zero in the middle of the Y_2 axis. Zero slope in the 'open' chamber at air calibration indicates stability of the oxygen signal. After closing the chamber, the slope deviates from zero as a function of the oxygen consumption of the polarographic oxygen sensor and of oxygen diffusion into or out of the chamber, which is the first point in the instrumental O₂ background test (<u>MiPNet19.18E</u>).
- **03 Background high O2** for recording an instrumental O_2 background test at high oxygen from 150 to 450 μ M.
- **04a Flux per volume** displays background-corrected oxygen flux per volume, which is most relevant to evaluate experimental details, i.e. flux per volume is optimally in the range of 20 to 200-500 pmol·s⁻¹·ml⁻¹. This plot is also chosen when measurements on sample density are available only at a later stage (<u>MiPNet19.18E</u>). Total O₂ flux is corrected for instrumental O₂ background, $J^{o}_{O2,V}$, to obtain sample oxygen flux per chamber volume, $J_{O2,V}$ (sample):

 $J_{O2,V}(\text{sample}) = J_{O2,V}(\text{total}) - J^{\circ}_{O2,V}$

- **O4b Flux per volume overlay** is similar to the layout '04a Flux per volume'. Graph 1 shows the background-corrected oxygen flux per volume [pmol·s⁻¹·ml⁻¹] superimposed from both chambers. Graph 2 shows oxygen concentration [μM].
- **05a Specific flux** for plotting background-corrected oxygen flux per unit sample. The unit as a marker for the amount of sample is defined in the F3 window. Example: Select **Unit** mg ▼ for the amount (mass) of sample added to the chamber. The mass-concentration is automatically calculated (division by chamber volume, typically 2 ml). Then mass-specific flux [pmol·s⁻¹·mg⁻¹] is displayed as

volume-specific flux [pmol·s⁻¹·ml⁻¹] divided by massconcentration [mg/ml]:

 $J_{O2,mass} = J_{O2,V} / mass-concentration$

- **05b Specific flux overlay** is similar to '05a Specific flux'. Graph 1 shows the background-corrected oxygen flux per unit sample superimposed from both chambers. Graph 2 shows oxygen concentration [µM].
- **06a Specific flux high O2** is same as '05a Specific flux' with the scaling adapted to the high oxygen concentration used for permeabilized muscle fibers (150 to 450 μ M; range 300 μ M).
- **06b Specific flux high 02 overlay** as '06a Specific flux high O2', but oxygen flux (graph 1) and oxygen concentration (graph 2) superimposed from both chambers.
- **07a Flux control ratios** shows the flux control ratio (*FCR*) and the oxygen concentration for the left chamber in graph 1 and for the right chamber in graph 2. First, the reference and baseline metabolic states are marked and the marks are named (Marks \ Names). Then the marks are selected in the menu Flux/Slope \ O2 slope.
- **07b Flux control ratios overlay** as '07a Flux control ratios', but *FCR* (graph 1) and oxygen concentration (graph 2) superimposed from both chambers.
 - » Layouts for O2k-MultiSensor applications are explained in the specific sections of the O2k-Manual.
- **8.3. All users** A reference layout or any other layout can be modified and saved under All users, which is recommended for a team using project-specific layouts.
- **8.4. User: Name** A reference layout or any other layout can be modified and saved under a specific user name, which is recommended to distinguish individual layouts from standard layouts used by a team.

Further details: <u>http://www.bioblast.at/index.php/Select_plots_in_DatLab</u>

9. Marks

Edit mark	information			
Start Stop N Points Average Name Value		5.00000		Delete points Interpolate points Recalc. slope
Commen <u>MitoPedi</u>	t Pyruvate, 5 μl, 5 a: <u>Marks</u>	mM final	Ca	ncel OK

Set Marks to obtain the average median, and range of the data within the mark, for calibration of the oxygen signal (<u>MiPNet19.18D</u>) and flux analysis (MiPNet19.18E). Marks define a section (period of time) in a selected plot (column) and contain -Selectthe data of Median the selected Average plot within Range

the defined section of time. Marks are shown by a horizontal bar in the active plot. Several marks can be set on any plot, but marks cannot overlap within a plot and are separated by one or more data points which are not marked.

O Minimum
Sort by
Time
Mark name

O Maximum

	L [®] Mark
CC Sa	CP ample 1.1
۲ı	02 concentration 1A
¥2	02 flow per cells(bc)1A
	Shift+L∕ð

In the Graph menu select ☑ Mouse control: Mark, or press Ctrl+M.

Select the active plot in a graph by a L^{\circ} left click onto the label of the plot in the figure legend on the right. The active plot is highlighted.

Set the cursor on the starting position of the mark, hold Shift and press the left mouse button Shift+L^A, while moving the cursor along the *X*-axis.

- Shift+R⁻ The period of a mark may be reduced or the entire mark deleted by holding Shift and pressing the right mouse button Shift+R⁻, while moving the cursor along the *X*-axis over the marked section.
 - Default mark names Marks are labelled with consecutive numbers by default, starting from 01, independent of the sequence of position of the marks. When deleting a mark Shift+R→A, then this mark number is missing on the mark list. Marks >99 are named as 00. Extending the default mark names, e.g. from '03' to '03-TD', maintains the numerical sequence for default names in subsequently generated marks.

Edit mark information L^A click into the top or bottom bar of the mark:

Name: Enter the new name. Mark names are R1 and R0 for air and zero O_2 calibration, respectively.

MiPNet19.18 C: DatLab guide

Edit mark	information				
Start Stop N Points Average Name Value		20.00000		Delete p	te points
Commen	I				
<u>MitoPedi</u>	a: <u>Marks</u>		Ca	ncel	ОК

Value: optional. In SUIT protocols, the value is entered as the volume of a titration, for calculation of the dilution of sample in DatLab-Excel templates. The value is used as a concentration in the Amp calibration window.

Comment: optional.

- 1. \square Select channels for which plots should be displayed.
- 2. Select the O2k chamber for which plots should be displayed in the marks statistics table.
- 3. L^A click on the source plot on which the marks are set.

4. ☑ Traceability in DatLab-Excel templates: Experimental details are copied to clipboard, where they can be edited further. Instrumental O₂ background correction and normalization of flux are calculated in the DatLab-Excel template, from O2 slope neg. This allows for traceability of instrumental settings, normalization and baseline correction of flux in the spreadsheets. Instrumental background tests and analyses on the amount of sample can be completed after an experimental series, and updated corrections of flux can thus be finalized in the spreadsheet.

- 5. ☑ Experimental details are copied to clipboard. This option is de-selected for export of data as displayed in the graph windows, particularly for using DatLab-Excel templates without traceability.
- 6. Select the statistical value calculated over the sections defined by marks. Default: Median.
- 7. Select the sequence of marks, sorted as a Time sequence or Mark name in alphanumerical order.
- 8. Values are displayed for selected plots. The source plot for marks is indicated by an "X".

<u>L \sim </u> click to select a single data cell of the table, copy by <u>Ctrl+C</u>, and paste into a Windows[™] file by <u>Ctrl+V</u>.

Copy to clipboard: L[®] Copy to clipboard to copy the mark statistics table into an Excel or SigmaPlot file. It is important to carefully evaluate which set of data rows is relevant.

More details » <u>MiPNet19.18E O2 flux analysis</u>.

- **Show system channels in statistics:** Select or deselect sytem channels (barometric pressure, block temperature etc.) to be shown in Statistics.
- 9.2. Manage mark statistics setup Rename or delete.
- **9.3. Copy marks from** a selected plot to the active plot.

9.4. Names

Names in active plot	Value		Template			
R	0.00000		RP2Pd	▼		
0Dig	10.00000		Preview	Preview		
1D	10.00000		numerical sequence	from template		
2Oct	10.00000					
3M.05	2.00000					
4c	16.50000					
5P	5.00000					
6G	10.00000					
7S	100.00000					
8Gp	20.00000					
9U	4.00000	-				
10Rot	1.00000	Ξ				
11Ama	1.00000					
▶ 12Tm	10.00000					
		-				

Mark names are shown from the active plot. Define the Template Name ▼ and Save template.

Select a Template ▼, L[®] click on Preview from template, and Rename all marks of the plot, including the Values.

9.5. Manage mark name templates

Rename or delete mark name templates in this window.
